## DETAILED ACTION

### *Priority*

1. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

### ***Claim Rejections - 35 USC § 102***

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 10-14, 19-20 and 24 are rejected under 35 U.S.C. 102(b) as anticipated by or, in the alternative, under 35 U.S.C. 103(a) as obvious over Demizu (4,934,349). Demizu teaches a sheathed glow plug 1 (Figures 1-7) for a self-igniting internal combustion engine, comprising a heating element projecting into a combustion chamber and a current feed through means 7, a switch 2 positioned in the region of the current feed-through, and the heating element is adapted to be controlled by control device 9 for opening and closing the switch 2.

As for claims 19-20, regarding of providing a housing, a ground and a regulator, Demizu teaches structural similarity that inherently capable of use as set forth in these claims (See MPEP 2131.01).

***Claim Rejections - 35 USC § 103***

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. Claims 15-18, 21-23 and 25-29 are rejected under 35 U.S.C. 103(a) as being unpatentable over Demizu in view of Hunt et al (5,529,035) and further in view of Hawkins et al (5,158,050).

Demizu teaches substantially the claimed invention including a control device 9 with a control unit for opening and closing the switch, and the switch is integrated or modularly arranged with a control circuit 10, but does not disclose a material for a glow plug and a switch including a semiconductor chip and being cooled by the cylinder wall. Hunt teaches a ceramic heater 42 and Hawkins teaches a semiconductor switch 34 and a temperature sensor 26 for cooling the switch. It would have been obvious to one having ordinary skill in the art to modify Demizu's invention to include a ceramic material for the heating element in order to provide more efficient engine combustion as taught by Hunt (col.3, lines 44-54), and a semiconductor switch cooled by the cylinder wall based on the control signal to thereby electrically heat the glow plug as taught by Hawkins (claim 1).

6. Applicant's arguments with respect to claims 9-18 have been considered but are moot in view of the new ground(s) of rejection.
